Reasons for Allowance

Applicants' response to the last Office Action, filed on April 20, 2005 has been entered and made of record.

Applicant's argument is persuasive, thus, the requirement of election/restriction issued on January 18, 2005 is expressly withdrawn.

The following is an examiner's statement of reasons for allowance:

Independent claims 1, and 9 are allowable over the prior art of record. Claims 2-8, and 10-17 depend from claims 1 and 9 respectively, therefore, are allowed.

Independent claim 1 recites the limitations of : segmenting the block of pixels into a plurality layers using two distinct methods; compressing the segmented blocks of pixels separately; determining a bit rate and corresponding distortion; and selecting an optimal comprise between the two segmenting methods. The combination of these features as cited in the claims in combination with the other limitations of the claims, are neither disclosed nor suggested by the prior art of record.

The closest reference of the article to Cheng discloses a method of compressing images using segmentation and the rate-distortion calculation. However, he does not teach the limitations of cited above.

Independent claim 9 recites the limitations of : an image compression system comprises a processing bank with a array of processors, each performs segmenting and coding of an image and calculating distortions; and an optimal engine selecting an optimization distortion measurements from selecting the first processor having an optimized compromise between the rate and distortion measurements.

Art Unit: 2623

engine which receives each pair of the rate and the first processors, . The combination of these features as cited in the claims in combination with the other limitations of the claims, are neither disclosed nor suggested by the prior art of record.

The closest reference of US 6236757 to Zeng et al. discloses a method of compressing images using segmentation and the rate-distortion calculation. He uses joint coder to optimally code joint region to achieve the optimal distortion. However, he does not teach the limitations of cited above.

In view of the amended claims and the Applicant's arguments , the rejections to claims 1-17 are expressly withdrawn.
